

Simple, affordable user manual updates

A professional user manual is a carefully crafted document produced by a trained professional. We would like to help you keep it that way.

As part of our after-sales service you have the option to come back to us for updates.

By using our technical authors to update your manual, not only will you be **maintaining the integrity of your manual**, you'll also gain the following benefits:

- Free up your staff to perform their main function.
- Protect the quality of your manual - over time authoring by non-technical authors will likely damage consistency, navigation and professional finish.
- Extend the life of your manual and investment.
- Avoid unexpected problems - normally it's the simplest of changes that cause the biggest headache.
- Save time - it's very likely that even a small change will take more time than planned as several elements will need updating.

Our update service covers the following:

- User manual edits and drawing replacements.

Additionally we update:

- Contents list.
- Index list.
- Glossary list.
- Links and cross-references.
- Document copyright, issue date, revision table and version reference.

And finally:

- Navigation check.
- Layout check.
- Build new manual.

Simply:

- 1. Contact us with your list of updates.**
- 2. We assess the changes required.**
- 3. We provide a simple quote based on the number of pages affected.**
- 4. If you are happy, we make the changes and provide a new professionally authored manual.**

Available for PDF format manuals where we have produced the manual.
If you have any other manuals which need updating please contact us for a personalised quote.
